

#200 WC NEIGHBORS

215 & 213 UPDATE

Clayton Homes, the sub-contractor for APCHA, will be on site October 7, 2024 to begin the removal of the 215 structure. The process involves lifting the building off of the foundation, loading it onto a tractor, and transporting it out of the village and back to Grand Junction. This will be a complicated procedure and will take approximately one week.

After the removal, it will be replaced with a modular home, no timeline has been provided to the METRO. We will advise everyone when accurate information is available.

Now we must prepare our families and activities for the inconvenience. The construction process will create dangerous conditions for the eastern section of the community. We have not been provided adequate advanced notice, however, we must prepare for the intrusion. Everyone must be vigilant for the safety of the children, also keep your pets contained and on a leash. NO vehicles are allowed on the roadway surface. Avoid travel thru the construction area, and detour around the site.

Do Not approach or engage with the construction crew!!!

The 213 project will follow and will be considerably more involved, the Metro will advise residents when we gather more information.

Please be patient, and advise the Metro board with constructive suggestions.
